WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

Ideation Phase - Problem Statement

2.1 Problem Statement

Background

Before the Salesforce CRM implementation, vehicle ordering at WhatNext Vision Motors depended on manual registers, spreadsheets and disconnected systems. Stock details were maintained by hand, order information was scattered across multiple files, and dealers and customers had to be followed up manually. As a result, orders were delayed, errors in stock and orders were common, and neither the operations team nor the customers had a clear picture of what was available.

Customer Problem Statement Template

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Operations Manager	manage vehicle orders	stock info is manual	systems are disconnected	**stressed**
PS-2	Customer	place vehicle orders	availability unclear	delayed updates	**uncertain**

PS-1: Operations Manager

The Operations Manager is responsible for making sure every vehicle order is processed correctly. Because stock information is maintained manually and the systems are not connected, the manager cannot quickly confirm whether a vehicle is actually available before an order is accepted. This leads to wrong orders, stock errors and constant manual follow-ups, which makes the manager feel **stressed**.

- **Goal:** Manage vehicle orders smoothly and accurately.
- **Obstacle:** Stock information is updated manually.
- **Root cause:** Systems are disconnected, so data is not shared in real time.
- **Emotion:** Stressed.

PS-2: Customer

The customer wants to place a vehicle order with confidence. However, the availability of the vehicle is unclear at the time of ordering, and status updates arrive late. The customer does not know whether the order is confirmed, which dealer will handle it, or when to expect the vehicle, which makes the customer feel **uncertain**.

- **Goal:** Place a vehicle order easily.
- **Obstacle:** Vehicle availability is unclear.
- **Root cause:** Updates are delayed.
- **Emotion:** Uncertain.

How the Problems Are Addressed

Problem	Solution in Salesforce CRM
Stock information is manual	Apex triggers validate stock and prevent orders for out-of-stock vehicles; batch jobs update stock levels automatically.
Systems are disconnected	Vehicle, Dealer, Customer, Order, Test Drive and Service Request data are centralized on one platform.
Availability unclear	Stock validation at order time gives instant, accurate feedback.
Delayed updates	Automated flows update order status dynamically and send scheduled test drive reminder emails.
Manual dealer follow-ups	Orders are auto-assigned to the nearest dealer based on the customer's location.

Conclusion

The two problem statements show that both the internal team and the customers are affected by manual, disconnected processes. Solving them requires a single automated platform, which led to the selection of Salesforce CRM for WhatNext Vision Motors.
