WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

Ideation Phase - Empathy Map Canvas

2.2 Empathy Map Canvas

Purpose

An Empathy Map Canvas helps the project team understand the user's thoughts, surroundings, behaviour and needs before designing a solution. For WhatNext Vision Motors, the map is built around the person most affected by the manual ordering process.

User Persona: Operations Manager

The Operations Manager oversees vehicle orders, stock and dealer coordination. This person works with registers and spreadsheets, handles complaints from dealers and customers, and spends a large part of the day on manual follow-ups.

Empathy Map (Persona: Operations Manager)

THINK & FEEL Concerned about wrong orders & stock errors	**HEAR** Dealer and customer complaints
SEE Registers & spreadsheets	**SAY & DO** Manual follow-ups
PAIN Delays & cancellations	**GAIN** Automation & dashboards

Detailed Explanation

Section	Observation	What it means for the project
Think & Feel	Concerned about wrong orders and stock errors.	The manager worries that an incorrect order or wrong stock count will reach a customer. The system must validate orders automatically.
Hear	Dealer and customer complaints.	Complaints about delays and unclear status show the need for dynamic status updates and timely reminders.

Section	Observation	What it means for the project
See	Registers and spreadsheets.	Data lives in separate files, so a centralized platform with real-time visibility is required.
Say & Do	Manual follow-ups.	Time is spent chasing updates by phone or message. Automation should replace these repetitive tasks.
Pain	Delays and cancellations.	Slow processing and out-of-stock surprises lead to cancelled orders and lost customer trust.
Gain	Automation and dashboards.	The manager wants automated workflows and dashboards to monitor orders and dealer performance at a glance.

Pain to Gain Mapping

Pain Point	Gain Delivered by Salesforce CRM
Delays in processing orders	Automated flows assign the nearest dealer and update order status.
Wrong orders and stock errors	Apex triggers block orders for out-of-stock vehicles; batch jobs keep stock accurate.
Cancellations	Pending orders are confirmed automatically once new stock is available.
Manual follow-ups	Scheduled email reminders for test drives are sent automatically.
No overall visibility	Reports and dashboards show order status and dealer performance.

Key Insight

The Operations Manager does not need more spreadsheets; they need an automated, connected system that removes manual work and provides real-time visibility. This insight directly guides the brainstorming and the final selection of Salesforce CRM.
