WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

Ideation Phase - Brainstorming & Idea Prioritization

2.3 Brainstorming & Idea Prioritization

Overview

After understanding the problem and the user's needs, the team brainstormed different ways to manage vehicle orders and dealer operations. Each idea was compared based on its level of automation, scalability and the real-time visibility it offers.

Ideas Considered

Idea	Type	Description	Limitation
Manual registers	Manual	Orders and stock recorded by hand in registers.	Slow, error-prone, no real-time view.
Spreadsheet tracking	Semi-Automated	Orders and stock tracked in spreadsheets.	Data stays scattered; still needs manual updates and follow-ups.
Standalone portal	Fully Automated	A separate portal built only for ordering.	Needs separate development and maintenance; limited integration.
Salesforce CRM	Fully Automated	Cloud CRM with flows, Apex, batch jobs, reports and dashboards.	Depends on Salesforce; needs initial configuration.

Prioritization Criteria

Idea	Automation	Scalability	Real-time Visibility
Manual registers	No	No	No
Spreadsheet tracking	Partial	Limited	Limited
Standalone portal	Yes	Moderate	Moderate
Salesforce CRM	**Yes**	**Yes**	**Yes**

Final Selection: Salesforce CRM

Salesforce CRM was selected because it satisfies all three priority criteria and fits the project requirements:

- **Automation:** Flows, Apex triggers, batch jobs and scheduled Apex handle stock validation, dealer assignment, order status updates and reminders.
- **Scalability:** Supports multiple dealers and multiple locations as the dealer network grows.
- **Real-time visibility:** Reports and dashboards give managers live insight into orders, stock and dealer performance.

Conclusion

Manual registers and spreadsheets cannot remove the disconnected, manual nature of the current process, and a standalone portal does not offer the same breadth of features. Salesforce CRM provides a centralized, automated and scalable platform for WhatNext Vision Motors, so it was chosen as the final solution.
