WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

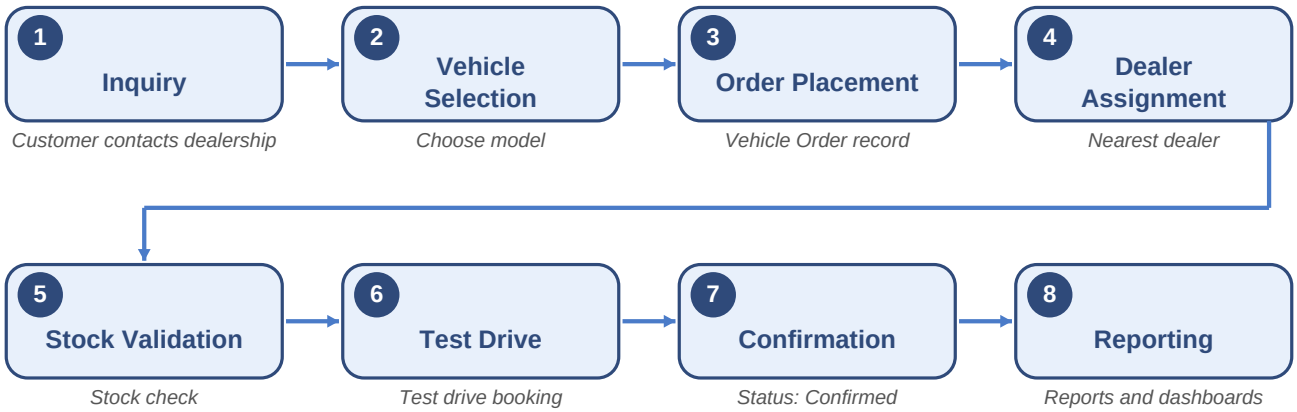
Requirement Analysis Phase - Customer Journey Map

3.1 Customer Journey Map

Overview

A customer journey map shows every step a customer goes through while interacting with a business, from the first enquiry to the final outcome. For WhatNext Vision Motors, the journey covers the complete vehicle ordering process, and each stage is supported by the Salesforce CRM solution.

Journey Stages: Vehicle Order Process



Stage-wise Description

Stage	Customer Activity	System Action (Salesforce CRM)	Outcome
1. Inquiry	Customer enquires about vehicles and availability.	Customer details are stored in the Vehicle Customer object.	Customer record created.
2. Vehicle Selection	Customer picks a vehicle model (Sedan, SUV, EV, etc.).	Vehicle records show model, price, stock quantity and status.	Preferred vehicle identified.
3. Order Placement	Customer places an order for the selected vehicle.	A Vehicle Order record is created with status Pending.	Order registered in the system.
4. Dealer Assignment	No action needed from the customer.	The Auto Assign Dealer flow finds a dealer matching the customer's location.	Order linked to the nearest dealer.

Stage	Customer Activity	System Action (Salesforce CRM)	Outcome
5. Stock Validation	Customer waits for availability confirmation.	Apex trigger blocks orders for out-of-stock vehicles; batch job confirms pending orders when stock is added.	Only valid orders proceed.
6. Test Drive	Customer books a test drive.	A Vehicle Test Drive record is created; a reminder email is sent one day before.	Customer reminded on time.
7. Confirmation	Customer receives order confirmation.	Order status is updated to Confirmed and stock is reduced.	Confirmed order and accurate stock.
8. Reporting	Not applicable.	Reports and dashboards summarise order status, dealer performance and sales.	Managers get real-time visibility.

Benefits of the Mapped Journey

- The customer no longer has to chase updates because status changes and reminders happen automatically.
- Out-of-stock orders are stopped early, which reduces delays and cancellations.
- Orders reach the right dealer without manual coordination.
- Managers can monitor the whole journey through reports and dashboards.
