# WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

**Requirement Analysis Phase - Solution Requirements**

## 3.2 Solution Requirements

### Overview

Solution requirements describe what the system must do (functional requirements) and how well it must do it (non-functional requirements). They convert the problems identified in the ideation phase into clear, buildable features for the Salesforce CRM at WhatNext Vision Motors.

### Functional Requirements

| FR No | Requirement | Description | Implementation in Salesforce |
|---|---|---|---|
| **FR-1** | Vehicle management | Maintain vehicle details such as name, model, stock, price, dealer and status. | Vehicle custom object with fields and a lookup to Dealer. |
| **FR-2** | Dealer management | Store authorized dealer information such as name, location, code, phone and email. | Vehicle Dealer custom object. |
| **FR-3** | Customer order creation | Allow orders to be created for a customer and a vehicle with an order date and status. | Vehicle Customer and Vehicle Order objects; Lightning app and tabs. |
| **FR-4** | Stock validation | Prevent orders for out-of-stock vehicles and update stock when orders are confirmed. | Apex trigger and handler class; batch Apex for pending orders. |
| **FR-5** | Dealer auto-assignment | Assign the order to the dealer matching the customer's location automatically. | Record-triggered flow: Auto Assign Dealer. |
| **FR-6** | Test drive scheduling | Book test drives and remind customers by email before the test drive date. | Vehicle Test Drive object; Test Drive Reminder flow with scheduled path. |
| **FR-7** | Reports & dashboards | Show order status, dealer performance and sales metrics to managers. | Salesforce Reports and Dashboards. |

### Non-Functional Requirements

| NFR | Description | Explanation |
|---|---|---|
| **Usability** | Lightning UI for easy navigation | Staff use a Lightning app with dedicated tabs for each module, so little training is needed. |
| **Security** | Role-based access control | Access to the app and data is controlled through user profiles and roles. |
| **Reliability** | Accurate automation | Triggers, flows and batch jobs must produce correct stock counts and order statuses every time. |
| **Performance** | Fast order processing | Orders are validated and assigned immediately, and bulk work runs in batches of 50 records. |
| **Availability** | 24/7 cloud access | The cloud platform is accessible at any time from any location. |
| **Scalability** | Multi-dealer support | More dealers, vehicles and locations can be added without redesigning the system. |

## Conclusion

The seven functional requirements cover the full ordering process, from vehicle and dealer data to reporting, while the six non-functional requirements ensure the solution is easy to use, secure, accurate, fast, always available and ready to grow.
