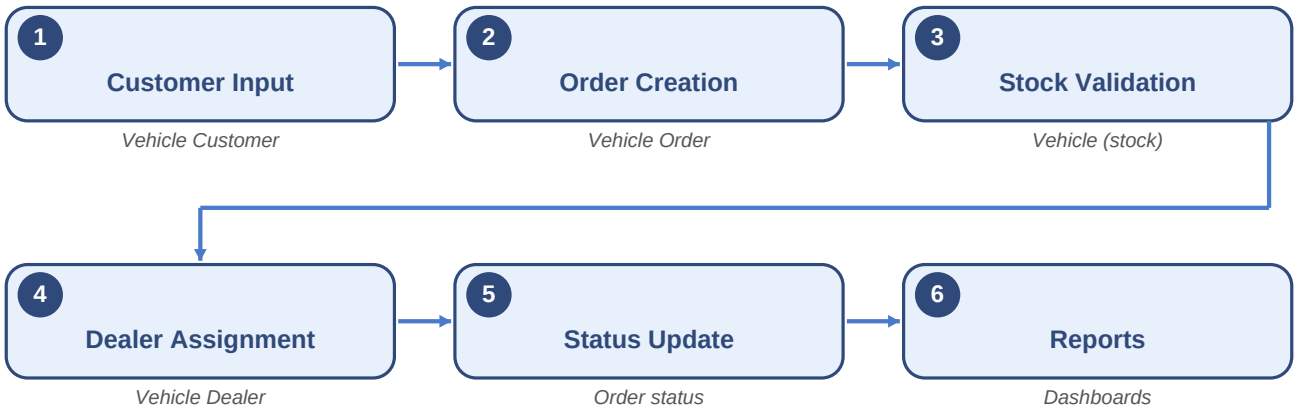
Requirement Analysis Phase - Data Flow Diagram

3.3 Data Flow Diagram

Overview

The data flow diagram (DFD) shows how information moves through the Vehicle Order Management System, from the moment a customer provides input until the data appears in reports. It helps the team see which process handles the data at each step and where the data is stored.

Data Flow: Vehicle Order Management System



Step-wise Explanation

Step	Process	Input	Processing	Output / Data Store
1	Customer Input	Customer name, email, phone, address, preferred vehicle type	Details entered and saved.	Vehicle Customer record
2	Order Creation	Customer, vehicle, order date	Order created with status Pending.	Vehicle Order record
3	Stock Validation	Order and selected vehicle	Apex trigger checks stock quantity; error shown if stock is zero.	Valid order; Vehicle stock updated
4	Dealer Assignment	Customer address	Flow matches the address with dealer location.	Order linked to dealer

Step	Process	Input	Processing	Output / Data Store
5	Status Update	Stock availability	Batch job confirms pending orders when stock is available.	Order status: Confirmed
6	Reports	Orders, vehicles, dealers	Data summarised into reports and dashboards.	Management insights

Key Points

- Data flows in one direction through automated steps, so no manual re-entry is needed.
- Stock validation happens before the order is accepted, which keeps stock data accurate.
- Every step reads from and writes to Salesforce objects, so reports always show current data.
