WhatNext Vision Motors

Shaping the Future of Mobility with Innovation and Excellence

Requirement Analysis Phase - Technology Stack

3.4 Technology Stack

Overview

The entire WhatNext Vision Motors solution is built on the Salesforce platform. Each layer of the application uses a Salesforce technology, which keeps the system integrated and removes the need for separate servers or databases.

Technology Stack

Layer	Technology	Usage in the Project
UI	Salesforce Lightning	Lightning app named WhatNext Vision Motors with tabs for Vehicle, Dealer, Customer, Order, Test Drive and Service Request.
Logic	Salesforce Flows	Record-triggered flows: Auto Assign Dealer (nearest dealer) and Test Drive Reminder (email one day before).
Database	Salesforce Objects	Custom objects: Vehicle, Vehicle Dealer, Vehicle Customer, Vehicle Order, Vehicle Test Drive and Vehicle Service Request, with lookup relationships.
Automation	Validation Rules, Triggers	VehicleOrderTrigger and VehicleOrderTriggerHandler validate stock and update vehicle stock quantity.
Processing	Batch Apex, Scheduled Apex	VehicleOrderBatch confirms pending orders when stock is available; VehicleOrderBatchScheduler runs it automatically every day.
Reporting	Reports & Dashboards	Order status, dealer performance and sales metrics for managers.

Why Salesforce?

- **Single platform:** UI, logic, data, automation and reporting are all available in one place.
- **Low-code and code together:** Flows handle simple automation, while Apex handles complex stock logic and batch processing.
- **Cloud based:** Available 24/7 and easy to scale as more dealers join.
- **Development environment:** A free Salesforce Developer Edition org and the Developer Console were used to build and test the solution.
